ABOUT US

About the Foundation

The SETD5 Syndrome Foundation is a family-led nonprofit organization founded to accelerate research into SETD5 Syndrome and build a global community of support for the families it affects. We are entirely volunteer-run, with every dollar directed toward research, family programs, and advocacy.

> "SETD5 Syndrome is a diagnosis, not a destiny.
> Every child is unique, and every family's journey looks different."

Mission

To fund the science, support the families, and build the infrastructure needed to transform outcomes for every person living with SETD5 Syndrome worldwide.

Our Values

- **Science-first.** We fund rigorous, peer-reviewed research and collaborate with leading geneticists.
- **Family-centered.** Every decision is made with families in mind. We are parents, caregivers, and allies.
- **Radical transparency.** We publish our financials, share progress openly, and are accountable to the community.
- **Global community.** We connect families worldwide and support research across institutions and borders.

THE CONDITION

About SETD5 Syndrome

SETD5 Syndrome is a rare genetic neurodevelopmental condition caused by a variant in the SETD5 gene, located on chromosome 3p25.3.

SETD5 haploinsufficiency — meaning one working copy of the gene instead of the usual two — disrupts normal development in ways that can affect cognition, behavior, communication, and physical features. Most cases occur as a de novo mutation, meaning the change arose spontaneously and was not inherited from either parent. The condition was first described in 2014 and remains significantly underdiagnosed.

Quick Facts

- **Gene:** SETD5 (SET Domain Containing 5), chromosome 3p25.3
- **Inheritance:** Most cases are de novo — new mutation, not inherited
- **First described:** 2014
- **Diagnosis:** Chromosomal microarray or whole-exome / genome sequencing
- **Also known as:** MRD23 · Autosomal Dominant Intellectual Disability 23 · SETD5-Related Syndrome

Common Features

No two individuals are exactly alike. Features vary widely in type and severity.

- Intellectual disability
- Speech & language delays
- Autism spectrum features
- ADHD & behavioral differences
- Feeding difficulties (early)
- Low muscle tone (hypotonia)
- Seizures (in some individuals)
- Distinctive facial features

Other Names You May Encounter

- MRD23 / Autosomal Dominant Intellectual Disability 23 — formal clinical classification in genetics literature
- Intellectual Developmental Disorder, Autosomal Dominant 23 — variation used in clinical records
- Intellectual Disability-Facial Dysmorphism Syndrome due to SETD5 Haploinsufficiency — NIH GARD name
- 3p25.3 Microdeletion Syndrome — closely related; SETD5 gene sits within the deleted region

OUR WORK

How We Drive Change

Fund Research

We fund peer-reviewed scientific research into the mechanisms, natural history, and potential treatments of SETD5 Syndrome, and are building a global patient registry.

Support Families

From the moment of diagnosis, families need connection and information. We provide resources, peer support, and an online community so no family faces this alone.

Advocate

We work to increase SETD5 Syndrome's visibility in the medical and scientific community, raise awareness among clinicians, and ensure families have a voice.

Build the Network

We are recruiting a Scientific Advisory Board and cultivating relationships with researchers and institutions worldwide working on SETD5 and related conditions.

Working Groups

Our work is organized into five focused groups, each led by board members and volunteers.

Community Support	Family resources, peer support programs, and online community.
Medical & Scientific	SAB recruitment, researcher relationships, patient registry.
Governance & Legal	Incorporation, bylaws, 501(c)(3) status, legal foundation.
Fundraising & Finance	Fundraising strategy, grants, donor database, financial infrastructure.
Communication & Branding	Website, social media, visual identity, and public voice.

HOW TO SUPPORT

Ways to Make a Difference

Donate

Every gift goes directly to SETD5 Syndrome research and family programs. We keep overhead as low as possible. Donate at setd5syndrome-foundation.org/donate.

Spread the Word

Share our mission with your network. Follow us on social media and help us reach the researchers, donors, and families who need to find us.

Partner with Us

Is your organization working in rare disease, neurodevelopmental research, or family advocacy? We welcome partnerships that serve the SETD5 Syndrome community.

Join a Working Group

We welcome volunteers with skills in medicine, law, communications, finance, and community building.

For Researchers

If you are working on SETD5 or related conditions, we want to hear from you. We are actively building research collaborations and funding promising work.

For Journalists & Media

We are available for interviews, background briefings, and can connect you with families willing to share their stories. We respond to every inquiry.

Get in Touch

We respond to every message — families, researchers, donors, and journalists alike.
